

WORKSHOP INTERNATIONAL FISHERIES AGREEMENTS

Hotel EVA, Faro, 18th April 2013

Keynote Speakers:

- Marko Lindroos: University of Helsinki
- Pedro Pintassilgo: University of Algarve
- Emmi Nieminem: University of Helsinki
- Lone Kronbak: University of Southern Denmark
- Maija Holma: University of Helsinki

Many fish stocks worldwide are harvested by several countries. These stocks migrate through the high seas and/or cross Exclusive Economic Zones of more than one country. International Fisheries Agreements are often created to ensure a cooperative management of these resources. However, the success of International Fisheries Agreements has been rather limited. In this context, the workshop approaches some of the main challenges faced by International Fisheries Agreements.

The Workshop is organised under the Research Project “Comprehensive Bioeconomic Modeling of Renewable Resources: Integration of Game Theory, Valuation and Multi-species Interactions”, funded by the Finnish Academy.
